D.RIDDELL - SENIOR LABORATORY TECHNICIAN:

STATEMENT OF CERTIFICATION

This is to certify that analysis has been carried out using polarised light microscopy and dispersion staining techniques to determine the presence of asbestos fibres. The methods of analysis are in accordance with HSE 's Analysts Guide HSG248 and the PJL Laboratories technical procedure document (PIL/03) and are UKAS accredited. PJL Laboratories cannot accept responsibility for the accuracy of sample information provided by the client, or whether the sample is representative of the material sampled. Any interpretation of whether a material is board or cement is entirely the opinion of the analyst and therefore outside the scope of accreditation. These may not be used as confirmation for the tender of removal.
